

Setup LeakFinder for player analysis

For ease of use Hand2Note for gameplay and for analysis of players I recommend to create two versions of Hand2Note.

One for gameplay with all settings and HUDs, another version for analysis and detailed analysis of players.

- Create a copy of the folder Hand2Note

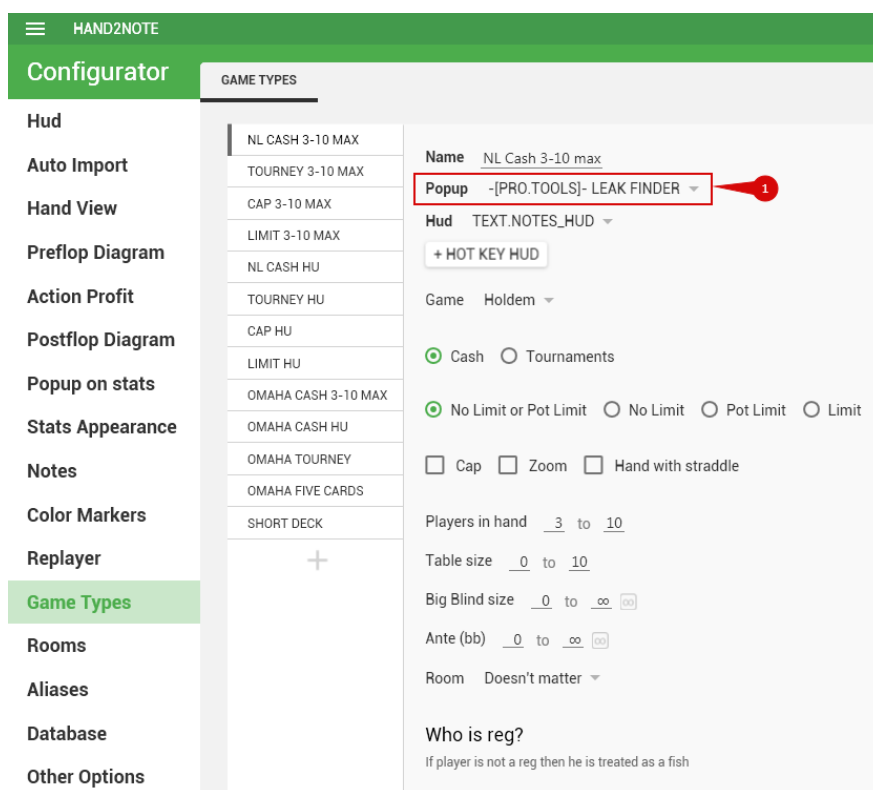

C:\Program Files\Hand2Note

CTRL+C and CTRL+V

- Rename new folder and install into this folder **H2N LeakFinder**

- Launch the new version of Hand2Note

- Open settings **Configurator/GameType** set popup **[PRO.TOOLS] LEAK FINDER** for all GameTypes

- Create a new base and make import hands to Hand2Note.

Statistics will appear after processing the database.
