

Setup LeakFinder for player analysis

For ease of use Hand2Note for gameplay and for analysis of players I recommend to create two versions of Hand2Note.

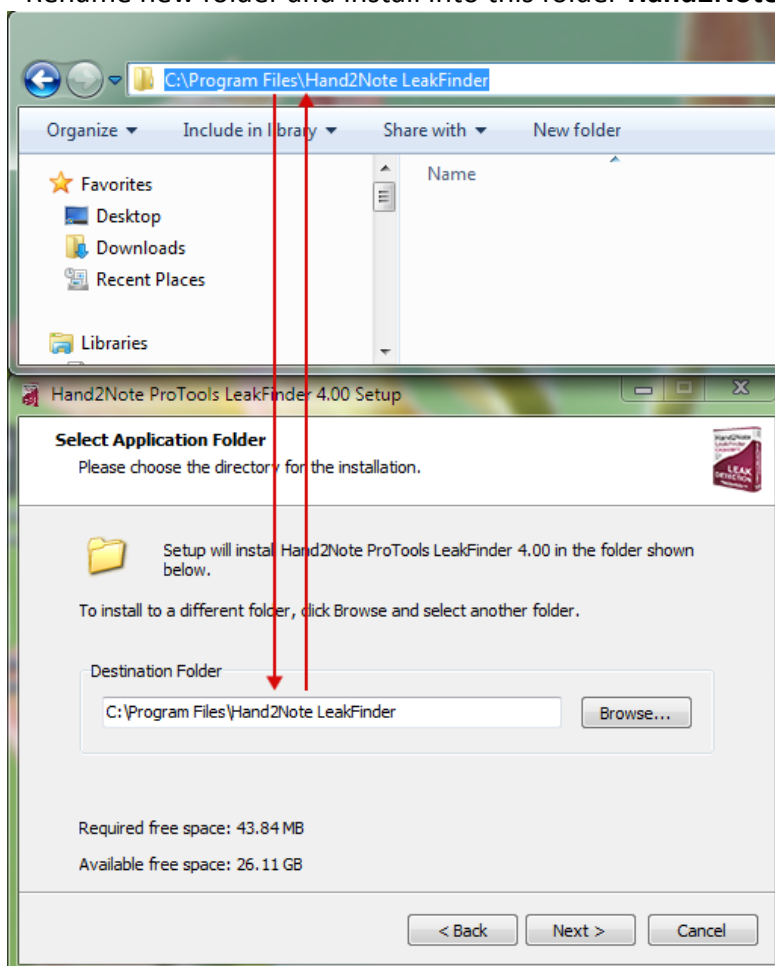

One for gameplay with all settings and HUDs, another version for analysis and detailed analysis of players.

- Create a copy of the folder Hand2Note

C:\Program Files\Hand2Note

CTRL+C and CTRL+V

- Rename new folder and install into this folder **Hand2Note LeakFinder**

- Launch the new version of Hand2Note

- Create a new base and make import hands to Hand2Note.

Statistics will appear after processing the database.

about using configurator

- close Hand2Note

- open folder with popups

C:\Program Files\Hand2Note Leakfinder\Config\Popup profiles

- rename extension of main file

<https://c2n.me/43NtIPu.png>

- make changes in configurator

and rename it back
